Over 2013 and 2014 the School of Business at UNSW Canberra has made great strides in improving its research performance and focus, and a strong research culture is evident across the School. Following an external review of the School in late 2013, the School identified three key areas of research focus: logistics and business systems modelling; public sector management; and governance and strategic decision-making. Over the coming years, the School aims to strengthen its international reputation for high quality research based on increased collaboration among staff in the School across these three research areas.

Over 2013 and 2014 the School recruited a substantial number of academic staff who have strong records of publication or who are early career researchers of high potential. These new colleagues include: Professor Elizabeth Chang; Professor Deborah Blackman; Professor Kerry Jacobs; Professor Max Tani; Associate Professor Graham Heaslip; Dr Marina Zhang; Dr Sue Williamson; Dr Omar Hussein; Dr Naeem Janjua; Dr Wendy Shelton; Dr Leon Jiang; Dr Junfan Yu; and Dr Charles Yala. The School also welcomed Ms Dora Gava to the newly created role of School Manager (Research) in late 2014.

The quality and focus of the research undertaken in the School of Business at UNSW Canberra has increased markedly over 2013-14. The School published a growing number of high quality journal articles. The School also attracted research grant support from a broader range of local and international funding bodies. We also graduated an increasing number of PhD and Master of Philosophy students, with 11 research students graduating in 2014.

I am confident that the School’s research performance will maintain this impressive trajectory over coming years.
Research themes

Research in the School of Business has three focus areas of research concerning the business of organisations. These areas are interrelated and cross-area collaborative research is expected to develop further in the future. Across these three areas, we cooperate with a range of external stakeholders and research partners.

Logistics and Business Systems Modelling

One key field of research is the area of logistics and business systems modelling. The School has staff with expertise in humanitarian logistics, business analytics, modelling and big data at the intersection of business and advanced information technology. Research is carried out through partnerships with industry to develop innovative solutions in logistics networks, asset management and sustainment. Industry partners include WA Department of Transport, ADF Joint Logistics Command, and Royal Australian Navy Logistics.

Public Sector Management

The School also has a research focus on public sector management. This domain comprises the ways in which public services are delivered and the capabilities and knowledge required for the provision of those services. One particular research strength in this area is public sector human resource management, including performance management. External engagement in this research area involves the Australian Public Service Commission and the Defence People Group (Department of Defence).

Governance and Strategic Decision-Making

The third major area of research in the School is governance and strategic decision-making. Decision-making, evaluation and accountability are crucial aspects of good governance in public and private organisations. The School has expertise in each of these aspects informed by the use of rigorous research methods and analyses. Relevant external stakeholders include the Institute of Chartered Accountants, the World Bank and the Asian Development Bank.
Academic research profiles

Professor Deborah Blackman

Public administration and management are core areas of the School’s research agenda. One academic who is at the forefront of this important research field is the School’s Professor of Public Sector Management Strategy, Deborah Blackman.

Professor Blackman is interested in the formulation of strategy and how it is operationalised to achieve organisational objectives. From a public sector perspective, this means Professor Blackman’s research is focussed on the issues that arise when policy intentions are not realised through implementation. That is, when strategic plans do not deliver the desired results. As Professor Blackman explains, ‘I’m interested in why things don’t work’.

Professor Blackman draws on her previous management experience in the private sector and her academic expertise to ascertain the challenges involved in a specific context and to gain critical insights for future practice. Professor Blackman’s areas of academic expertise include knowledge management, organisational learning, strategic human resources and performance management. This unique perspective allows her to understand the development and operationalisation of strategy at both the individual and organisational levels. This has led Professor Blackman to state that, ‘you can’t have a change in behaviour without a change in knowledge. It’s fundamentally impossible’. Such an observation determines how she approaches the development of new implementation plans.

At present, Professor Blackman is working on an international research project to gain a better understanding of the management skills required to operationalise strategy. Her project is specifically comparing the management capabilities and training of Canadian public servants with those of their Australian peers. Prior to this, Professor Blackman and her colleagues developed the diagnostic framework currently being used by the Australian Public Service to determine the effectiveness (or not) of their performance management systems. Professor Blackman was also involved in a large Australian Research Council research project which looked at the barriers and enablers of effective whole-of-government working.

Professor Blackman, in conjunction with Professor O’Donnell, will work with one of the School’s three research groups – Public Sector Management. Not only does Professor Blackman believe that the variety of disciplines available in the School provides unique opportunities, she also thinks the diversity will enhance the collaboration with the other research groups. In this respect, she considers the Governance and Decision-Making group to provide the most potential, but also sees the possibility to connect with projects from the Logistics research group.
Professor Kerry Jacobs

Kerry Jacobs is a Professor of Accounting at UNSW Canberra who is interested in understanding how governance and accountability operates within society. This interest means Professor Jacobs is not your typical accounting academic as his research often traverses disciplinary boundaries in an effort to better understand the nature of practice. In fact, it is the intersection between various academic disciplines and practice that he finds most fascinating. As Professor Jacobs points out, ‘I’m interested in how accounting fits into everything else’. Furthermore, he explains that his expansive approach is primarily thanks to the interdisciplinary co-authors that he has published with in the past. The result of this broad research focus means that Professor Jacobs’ research has not only been published in accounting journals, but has also found its way into journals that specialise in public administration and public policy.

The specific focus of Professor Jacobs’ research has been on the evolution and practice of performance audit in government and the nature of accountability in the public realm more generally. This has led to a number of projects that have had a direct impact on society at both the strategic and operational levels. From his work developing performance audit approaches with the Australian National Audit Office (ANAO), to the assistance that he has provided Aboriginal corporations in establishing better governance arrangements, Professor Jacobs’ research has clearly had a positive influence. Combine this with his contributions on the two Auditors-General Committees he sits on and it’s easy to see that practice is, indeed, an integral part of his research agenda. ‘The trick’, Professor Jacobs argues, ‘is to use your research to speak to two worlds’ – academia and practice.

Moving forward, Professor Jacobs’ research experience will also prove invaluable in helping the School of Business develop one of its three research groups. The research group, Governance and Decision-Making, will benefit from Professor Jacobs’ expertise to drive a number of projects whilst also developing the research skills of junior academics. Along with Professors Chand and Tani, Professor Jacobs will provide the academic guidance required for the Group’s success.
Dr Omar Hussain

Dr Hussain is interested in understanding how organisations measure and manage risk in an ever-changing environment caused by technological advances. Primarily, these advances are being driven by the networking advantages provided by cloud computing and recent access to vast amounts of data (Big Data) which will lead to uncovering many different insights by which decisions in environments, such as logistics, can be made better.

Dr Hussain is guided primarily by traditional risk management frameworks, but he argues that these frameworks need to be adapted in the face of a rapidly changing technological environment. This means traditional approaches – that have relied heavily on historical events to predict future risks scenarios – have their limitations.

The insurance industry is clearly an example of this. Although an understanding of history is, indeed, necessary, it is not a sufficiently reliable predictor of future risks. To this end, Dr Hussain, through his research and collaboration with research professors such as Professor Elizabeth Chang, has designed a tool that provides businesses with more information and a decision support system that will assist them in making informed decisions. Dr Hussain named his tool the Risk Based Decision Support System (RBDSS).

The impact of Dr Hussain’s research has the potential to provide significant benefits to society. The focus of Dr Hussain’s research is Australia’s service sector which represents approximately 68% of Australia’s GDP. The success of this sector increasingly relies on its use of technologies, such as cloud computing and informed decision-making, to enable service organisations to better understand the risks involved in their business.

In addition, such decision-making tools can assist firms to choose vendors that pose a lower risk to the organisation over those that pose a higher risk.

To demonstrate the nature of the risks involved, if organisations are unable to access important business data or access a service, because the cloud service is unavailable, business could be lost. Although reduced access to information could lead to a variety of issues – large and small – in extreme situations, business failure could ultimately be the price that is paid. Therefore tools that reduce this risk can, indeed, contribute greatly to the stability of Australia and its economy.
Staff research interests

Professor Deborah Blackman
Professor of Public Sector Management Strategy
- Performance management in the public sector
- Public sector reform
- Disaster risk management

Professor Satish Chand
Professor of Finance
- Peace and economic prosperity
- Property rights and economic development
- Land tenure, productivity and economic development

Professor Elizabeth Chang
Professor of Logistics
- Defence logistics
- Ambient security, trust and risks
- Cyber-physical systems and Internet of Things for intelligent transportation
- Data quality, data cleansing and co-joint data mining

Dr James Connor
Senior Lecturer
- Loyalty and social interaction
- Social interaction and sport
- Social interaction and project management

Dr Natalie Cujes
Lecturer
- The business of Australian Federal Courts (including their operation, access to justice issues, practice and procedure and judicial decision-making)
- Contract law
- Trade practices law (competition and consumer law)
- Business law

Dr Saskia de Klerk
Senior Lecturer
- Entrepreneurship (nascent, immigrant and female)
- Business management (innovation)
- Creative industries (bricolage, social capital and entrepreneurship)
- Business networking, social capital and bricolage
- Business climate and social integration

Dr Denise Faifua
Senior Lecturer
- Focus on individual in groups, and societies, and person-centred constructs as they relate to work, careers, vocational rehabilitation and employability
- Examination of careers in organisations and institutions from a range of perspectives in career theory (career cognition, career development, career management, career vocation)
Mr Michael Forsyth  
Deputy Head of School – Teaching & Education  
Undergraduate Coordinator  
  - Government as a complex adaptive system

Dr James Hanson  
Senior Lecturer  
  - Educational psychology  
  - Business education and management development

Associate Professor Twan Huybers  
Deputy Head of School – Research  
  - The economics of travel and tourism  
  - The use of choice experiments in decision-making analysis  
  - Student evaluation in higher education  
  - Scandal and consumer behaviour

Dr Nelia Hyndman-Rizk  
Lecturer  
  - Cross-cultural management  
  - Multiculturalism, migration studies, ethnic entrepreneurship  
  - Lebanese diaspora  
  - Contemporary Middle East and Lebanon – social movements, women’s rights – Arab Spring

Dr Omar Hussain  
Lecturer  
  - Logistics service management  
  - E-logistics risk management  
  - Decision support and their applications to logistics areas

Professor Kerry Jacobs  
Professor of Accounting  
  - Public sector accountability, governance and audit  
  - Financial management and reform  
  - The relationship between accounting and politics  
  - Indigenous accounting and governance

Dr Naeem Janjua  
Post Doctoral Fellow  
  - Web-based decision support systems  
  - Logistics process modelling and services orchestration  
  - Virtual collaborative logistics

Dr Leon Jiang  
Lecturer  
  - Accounting  
  - Finance  
  - International business  
  - Strategic management

Dr Jason Mazanov  
Senior Lecturer, Postgraduate Coordinator  
  - Management of human enhancing technologies  
  - The effect of scandal on consumer behaviour  
  - Integrity management

Dr David Meacheam  
Senior Lecturer  
  - Knowledge management  
  - Human resource management  
  - Public management  
  - Higher education
Dr Frances Miley
Senior Lecturer
- Qualitative research in accounting and accounting education
- Defence financial management
- Popular culture and accounting
- Accounting history

Professor Michael O’Donnell
Head of School
- International employment relations
- Performance management in the public sector
- Enterprise bargaining in the public sector

Dr Daniel Prior
Postgraduate Research (PGR), Distance Delivery Coordinator
- The role of inter-personal interactions in value creation
- The nature of value destruction and value co-destruction
- Using superior value propositions to support business performance

Dr Keiran Sharpe
Higher Degree Research (HDR) Coordinator
- Decision-making under ambiguity, risk and uncertainty
- Analysis of strategic political interactions using game theory
- Organisational economics – especially the structure and design of organisations

Dr Wendy Shelton
Lecturer
- Governance and accountability
- Financial management in the public and private sectors
- Accounting history

Professor Max Tani
Professor of Finance
- The economics of migration
- The economics of higher education
- Economic growth and knowledge spillovers

Dr James Warn
Senior Lecturer
- Leadership in complex environments, where leaders attempt to influence across organisational boundaries, between agencies or across the community
- Leadership in cross-cultural contexts
- The responsible leadership mindset – a practitioner’s guide for leading in a complex world
Dr Sue Williamson
Lecturer
- Gender equality in the workplace
- Public sector human resources and industrial relations

Mr Robert Wylie
Lecturer
- Public policy analysis
- Public policy development
- Defence procurement and policy

Dr Marina Zhang
Lecturer
- Technological catch-up
- Institutional entrepreneurship
- Disruptive and business model innovation
- Emerging markets
Robert Wylie

I joined the School of Business, UNSW Canberra, after 30 years in the Australian Public Service. My PhD journey started when the School engaged me to teach certain postgraduate courses, initially on a ‘professional qualified’ basis.

Two factors drove my decision to undertake a doctorate. The first factor was the University’s requirement for professionally qualified staff to become ‘academically qualified’ by completing a PhD. The second was my desire to make sense of certain aspects of my professional experience. As a member of the School’s staff, I undertook my PhD part time.

My PhD topic emerged from my desire to make sense of my experience with Australian military technological innovation during my work in the Australian Department of Defence. I wanted to understand how Australia chose between local ‘make’ and imported ‘buy’ solutions to its requirements for military capability. I particularly wanted to understand why Australia’s ‘make’ solutions became so problematic.

My early reading established that the literature on development of military technology did not explain the Australian experience satisfactorily. While this posed a challenge, it also indicated how I might satisfy the requirement that my thesis contribute to theoretical knowledge. At the suggestion of my supervisor, I turned to the wider innovation literature, particularly that based on evolutionary economics. This culminated in our settling on a system of innovation framework for my research.

Trying to understand the problems that seemed to characterise Australian military technological innovation led naturally to thinking about how Australia’s innovation system performed relative to that of other comparable nations. This led in turn to my supervisor and I agreeing on a comparative case study methodology for the thesis. Such a methodology was not only well suited to the thrust of my research, it was also relatively novel in the literature on both military and non-military technological innovation.

However, I took considerable time to grasp the case study methodology. My supervisor’s guidance was crucial in curbing my tendency to tell a story and in leading me to develop the robust theoretical framework required for a doctorate. In addition, I underestimated the amount of time and effort required to prepare satisfactory case studies – a challenge exacerbated by my teaching obligations. Critical to my meeting this challenge was my interest in the topic, the sustained encouragement of my supervisor, my obligation to report progress to the school periodically and the steady support of the head of school.

My research question and my case studies co-evolved: the final version of the research question only precipitated out after I had finished assembling the case study data. Production of the final thesis then proceeded relatively quickly. But as I became totally immersed in the drafting, I became increasingly reliant on my supervisor and other colleagues for cold reader testing of my expression and logic.

After initial hesitation, I decided to participate in the University’s formal degree conferral ceremony. I was glad I did so: the ritual allowed my family to share my deep personal satisfaction in finally completing what was the most intellectually and emotionally demanding task I have ever attempted.

Research seminars

2013

Thursday 7 March
A new model for research engagement between industry and tertiary institutions
Associate Professor Andrew Sense, Wollongong University and Senior visiting Fellow, School of Business

Thursday 21 March
Aligning off balance sheet risk, on balance sheet risk and audit fees: A PLS path modelling analysis
Yuyu Zhang, Lecturer, School of Business

Thursday 28 March
Civil-military pedagogy and the establishment of the Faculty of Military Studies at the Royal Military College Duntroon: 1963-1968
Summer Scholar Jason Andrews and Dr James Connor, Senior Lecturer, School of Business

Thursday 11 April
Sustainable supply chain management: exploration, creation and evaluation of concepts, models and a roadmap
Dr Hendrik Reefke, Researcher, University of Auckland

Thursday 18 April
Sustaining public sector innovation: the balance between flexibility and control
Professor Jenny Stewart, Professor of Public Policy, School of Business

Thursday 2 May
Understanding the emergence of STI policies in the EU: the genesis of EU security research and the role of the EU Commission as policy entrepreneur
Dr Andrew James, Senior Lecturer, Manchester Business School, University of Manchester, UK

Thursday 9 May
Fair Work Act, 2009 and individual flexibility arrangements
Dr Sue Williamson, Lecturer, School of Business

Thursday 16 May
Contractors and the military: recent aspects in US research and prospective issues in ADF support
Dr Malcolm Hugh Patterson, Macquarie University

Wednesday 29 May
Corporate governance and seasoned equity offerings: offer methods and flotation costs
Professor Chandrasekhar Krishnamurti, Head of Finance Discipline and Director of Research, University of Southern Queensland

Thursday 30 May
The role of R&D in open and closed innovation
